Pilot operated check, pilot to open Common cavity, Size 08

VSON-08A

04.33.06 - X - 56 - Z

RE 18319-30

Edition: 03.2016 Replaces: 09.2009

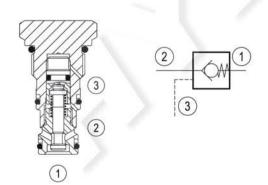

Description

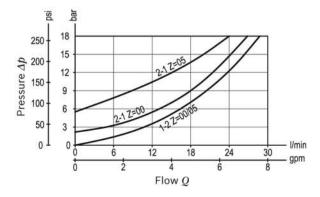

When pressure at 2 rises above the spring bias pressure, the poppet is pushed from its seat and flow is allowed from 2 to 1. The valve is normally closed (checked) from 1 to 2. When sufficient pilot pressure is present at port 3, the pilot piston acts to push the poppet from its seat and flow is allowed from 1 to 2. Precision machining and hardening processes allow virtually leak-free performance in the checked condition.
