Pilot operated check, dual

VSO-DE

05.53.43 - X - Y - Z

RE 18307-16

Edition: 03.2016 Replaces: 04.2010

Description

Flow is allowed to pass in one direction (V1 to C1 or V2 to C2), then the valve remains closed (checked) in both reverse directions (C1 to V1 or C2 to V2) in order to hold and lock in position the cylinder or other actuators; reverse flow is possible only when sufficient pilot pressure is applied at V2 or V1, which act as cross connected pilot ports, and the pilot piston lifts the poppet from its seat overcoming cylinder port pressure.

Technical data

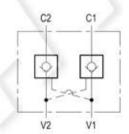

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 I/min. (8 gpm)
Pilot ratio	7 : 1
Weight	0.9 kg (1.98 lbs)
Manifold material	Aluminium

Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

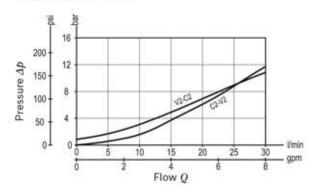

Mineral oil (HL, HLP) according DIN 51524
-30 °C to 100 (-22 to 212 °F)
10 to 500 mm ² /s (cSt)
Class 19/17/14 according to ISO 4406
see data sheet 18350-50

The version with O-Ring and heavier spring is generally recommended.

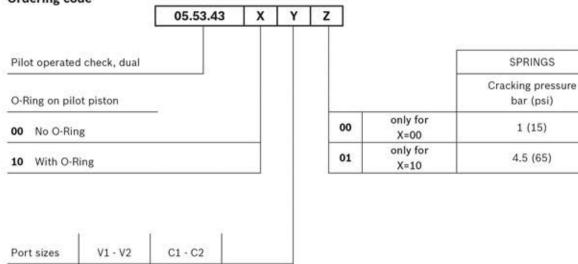

Note: for applications outside these parameters, please consult us.
